

# Simpliest turbo

## From GMod Wiki

### Turbo!

How to construct:

Spawn a vehicle.  
Put a [Wired Advanced Pod Controller](#) on it.  
Link the pod to the vehicle with the right click option.  
Attach a thruster on the vehicle, in the center of the back.  
Optional, but helps a lot: Use the weight tool addon to increase the weight of the thruster, this increases the thrust A LOT  
And finally wire the A on the thruster to any output on the pod controller that you like.
