	Notes:	-

Here is a very simple tutorial designed to introduce the concept of the two-way radio.

1. Spawn a speedometer on a vehicle of your choice.
2. Spawn a screen with one value called "timer" on a wall or flat prop.
3. Spawn a two-way radio on the vehicle and do the same next to the screen.
4. Pair up the 2 two-way radios.
5. Lastly wire the speedometer to the two-way radio on the vehicle and do the same for the screen on the wall or flat prop.

You should now have a working wireless speedometer!

E-mail me if you want it better explained or having problems.
