Simple Wire Hydraulic with 1 button

Simple Wire Hydraulic with 1 button: Simple Wire Hydraulic with 1 button	
📄 **Description:**	
👤 **Original Author:**	User:Daniellynet
🖼 **Created:**	4 April 2009
📄 **Notes:**	

You need ->

- 1. Two PHX plates. (PHX 2x2)
- 2. Wire hydraulic.
- 3. A button.

- Spawn your first PHX plate on the ground and freeze it.
- Spawn your second PHX plate above the first PHX plate and freeze it.
- Take out your Hydraulic and make a hydraulic from the first plate to the other plate.
- Now, spawn a button with TOGGLE on.
- Ok, lets say the hydraulic was 500 in length. Make the button: ON = 400 and OFF = 0. That way the plate will be 100 units under the second plate when the hydraulic is on.

Done.... First time posting in wiki :P
